# MANUAL TORQUE MULTIPLIER HT6-5:1 – TECHNICAL DATA

## DESCRIPTION

The Christie Manual Torque Multiplier HT6-5:1 employs multiple stages of epicyclic gearing to give a accurate torque output and ratio.

Ratio quoted is the torque multiplication ratio, not the velocity ratio as given for some competitor's products. For example, the velocity ratio may be 5.454:1 to give a torque multiplication of 5:1 +/-4%.

The reaction force works in the opposite direction to the applied torque. The point of reaction should be kept as far away as practicable from the centre of the square drive to minimise this force.

Where the standard reaction plate is not suitable, it may be possible to adapt it. Please contact W. Christie (Industrial) Limited for assistance.

The HT6-5:1 must always be used with the following:-

- Impact Quality Sockets
- Reaction Arm
- Manual Torque Wrench
